

Raynell Lu Soon Hong

+852 6346 5693 · raynellsh@gmail.com · in/raynellsoonhonglu · Hong Kong SAR

Education

The Hong Kong Polytechnic University
Bachelor of Science, Computer Science

Hong Kong
Aug 2022 – Aug 2026

Experience

Alphabag Limited
AI Software Developer

Hong Kong
Dec 2025 – Present

- Assigned to create a full stack application on a customizable timetable for organizing kindergarten lessons for a span of 3 months.
- Participated in all stages of the application development including designing the structure to hosting it on the web. Used **Typescript**, **Tailwind**, and **NextJS** for front end development, used **Firebase** for back end development, utilized AI during development to enhance efficiency and enhance productivity. Created Admin panel for administrator to configure the timetable and assign lessons to pupils.
- Successfully created the application with all the features required by supervisor and the application is being used for production.

Hong Kong Observatory
Data Analyst Intern

Hong Kong
Jan 2025 – Jun 2025

- Assigned to analyze behavior of typhoons in the past decade for in-depth new findings and present them in graphical forms.
- Worked with **Python** and related libraries which include **Numpy**, **Pandas**, **Matplotlib** and **Py-Art**, a library tailored for satellite image studies. Initially handled data discrepancy in **Microsoft Excel** during data pre-processing stage. Subsequently created scatterplot using **Matplotlib** to represent the overall characteristic and behavior of typhoons.
- Successfully finished my task with supervisor being satisfied with the results obtained.

Primal Solutions Sdn Bhd.
Machine Learning Intern

Sibu, Malaysia
May 2024 – Jul 2024

- Given a university's student transcript, I was tasked with predicting whether the student is on downward academic trajectory.
- Created two different machine learning models which are **K-means clustering** to group students with similar academic performance together and **Logistic Regression** to predict whether they are on a failing trajectory. Built both models with **Python** and related libraries like **Sci-kit learn**, **Numpy**, **Pandas**, and **Matplotlib**.
- Finished the task successfully with logistic regression achieving over 90% accuracy on prediction.

Projects

Monopoly

Mar 2025

- Group project with 3 others to build a Monopoly game with **Java** using **Agile** and **OOP** methodologies.
- Constructed the monopoly game using the **MVC** architecture, implemented a fully rendered board in the CLI and all the functionality. I was mainly responsible for saving the state of the game including player info and game board status by using JSON file.
- Successfully built a fully playable miniature Hong Kong version Monopoly.

Stock Prediction System

Sep 2025 – Apr 2026

- Final year project to build a stock prediction action system (Buy/Sell/Hold) for Hang Seng Index(HSI).
- Building a time series **Transformer model** to predict the changes of HSI in the near future and perform (Buy/Sell/Hold) actions accordingly, Implementing sentimental news analysis and historic price analysis as features of prediction, Working with **Python** and relevant libraries such as **PyTorch**, **Numpy**, **Pandas**, **Matplotlib**.
- Ongoing project until April of 2026, aim to achieve a win rate of around 55% - 60% to help users gain a profit with HSI.

Skills

Programming Languages: Python, C++, Java, JavaScript, TypeScript

Databases: MySQL, MongoDB

Tools and Frameworks: Git, AWS, React, Vite, NodeJS, ExpressJS, NextJS, Tailwind, Flask, Docker, Terraform, Numpy, Pandas, Matplotlib, Scikit-learn, Pytorch, Firebase, Linux Commands

Languages: English (Native), Mandarin (Native), Cantonese (Conversational)

Certifications

AWS Solution Architect – Associate

Dec 2025

Obtained knowledge on designing scalable, secure AWS architectures, able to deploy **VPCs**, **EC2**, **S3**, **RDS**, optimizing costs on different scenarios, also know how to implementing high availability, disaster recovery systems, proficient in using IAM identifications, networking, serverless services like Lambda for robust cloud solutions.
